

MIDALIDARE
ESTATE

42/25 Syrah
& Cabernet
Sauvignon 2019
Terroir

We created 42/25 for You. No matter who you are and where you are, at any time a few sips will take you to Mogilovo and will share with you the passion our wines are filled up with. We created 42/25 so that you could have a taste not just of its aroma but of spirit of Midalidare. 42/25 is not only telling you about itself. Its aroma and taste are taking you on an exciting journey. You are traveling to Mogilovo, but it is not about the destination. It is about the emotion. And the emotion starts with a glass of 42/25 right where you are, goes through 42 degrees latitude and 25 degrees longitude and ends wherever you decide.

The Violet PIN is located at the easternmost plots of Karaliets vineyard where are the plantations of Merlot and to the northern part of Shipkata vineyard where are the plantations of Syrah.

Terroir: Cabernet Sauvignon vines are planted on the eastern part of [Karaliets vineyard](#), and Syrah vines are planted on the north part of [Shipkata vineyard](#). Vines on both vineyards are with south exposure. The terroir characteristics are: average (Karaliets) and low (Shipkata) altitude; big temperature amplitude; mild winter, hot summer; optimal proportion of sunshine and rainfall; average to low sandy and clayey soils (Karaliets) and alluvial soils with high presence of limestone (Shipkata).

The combination of soils that guarantees the right vigour, marked temperature range, perfect exposure, and carefully considered advanced viticulture ensure the development of great aromatic complexes and thus perfect characteristics of the wines.

Viticulture: Vines are of French origin, at average age of 13 years for Cabernet and 7 years for Syrah. The forming is double vertical shoot positioning (VSP or double guyot). Regulation of production is twofold - the first operation is always done when the height of the shoots is 15-20 cm. Only one shoot per bud is left. This creates spaces suitable for the growth of the shoots, more air circulation. The second regulation is made when the bunches start to change colour, in the veraison period. The evaluation is done carefully every year. Excess and low-quality bunches are eliminated in order to obtain a correct plant production. Leaf mass regulation is made on Syrah vines three times during the growing period.

Karaliets vineyard: Karaliets vineyard is situated in the east of the Mogilovo village territory, near the second eastern winery of Midalidare. Its size is 60 hectares. The soils are average to low sandy and clayey and alluvial in the southern area. The vines are planted entirely with southerly exposure. [Merlot](#) and Cabernet Sauvignon are the varieties planted on Karaliets.

Shipkata vineyard: Shipkata vineyard is located in the east of Mogilovo. This is the plot with the lowest altitude, situated in a 44 hectares area in the very heart of the valley. The soils of Shipkata vineyard are of alluvial origin and are characterized by presence of clay and slime, with a high content of carbonates. Shipkata vineyard is situated on hilly terrain with 10% slope. The average altitude is 290-310 metres above sea level. The specific features and the advanced viticulture are what makes Shipkata vineyard superb terroir. Syrah, Petit Verdot, [Sauvignon Blanc](#), [Chardonnay](#) and Viognier are grown on the vineyard.
